

AES Environmental

NEW! - Electric height-adjustable stand

Now available from AES is the electric height-adjustable floor stand. This revolutionary new stand is ideal for shared workstations where operating height can be adjusted to suit each individuals' requirements. This stand has also been equipped to accommodate wheelchair access.

At the touch of a button the stand can be raised or lowered through a height range of 600 to 990 mm. The lifting motors provide quiet operation and are safe to operate while the cabinet is in use.

By using the programmable buttons on the control panel, preset heights can be stored in the stands' memory.

The control panel is simple in design and uses easy-clean, low-voltage controls that are splash resistant.

This floor stand is supplied as an option, and has been designed to accommodate all categories of safety cabinets. For more information enquire with your nearest AES sales branch.

- Australian-made
- Touch-button operation
- Quiet operation
- Memory function
